

## MAGsafe®

**MAGsafe®** is a computerised table designed to record the movements into and out of explosives magazines by approved personnel via RFID. The table contains both its own tracking and record software which link's to explosive management control and processing software and is integrated into a high level access security program. Combining this with Bio Reader access controls and a 5x5 risk matrix the system sets a new level for security and risk monitoring. A further benefit is its speed and its automated data input.

The table comes with RFID tag and laser printers for the printing of tags and reports. MAGsafe® can also be used in both Electronic Proof of Delivery (EPOD) and consignment stock management with live reporting on actual stock movement and stock on hand. This speeds up the process and efficiency of ordering and manufacturing for both consumers and suppliers

System benefits are -

- **Security**
- **Accountability**
- **Fast Electronic Data Transfer**
- **Efficient**
- **Traceability**
- **Risk Profile**
- **Stocktaking**
- **Links to Logistic Management Systems**
- **Electronic Proof of Delivery (EPOD)**
- **Reduce workload**
- **Instant reporting**
- **Unit/Box Accountability**
- **Built in redundancy**
- **Fast reporting**
