

PREtrack®

PREtrack® is the application of RFID technology in the explosives manufacturing system to allow the tagging and tracking of explosives throughout the manufacturing process. PREtrack is set up to automatically enter information to the company data base and to the RFID tag. Information includes type, date of manufacture, net explosive quantity, materials used and operator information. PREtrack records the QA/QC data along with the personnel and supplies this information to the PREtrack server.

System benefits are -

- Security
- Accountability
- Fast Electronic Data Transfer
- Efficient
- Traceability
- Risk Profile
- Unit/Box Accountability
- Electronic Proof of Delivery
- Workload Reduction
- Higher reporting functions
- Electronic dispatch
- Paperless system
- Fast reporting
